

# JavaScript Cycles

---

## 03 JavaScript Variables

### 1. Declare a variable, assign a value to it, and display it

```
<html>
<body>

<script type="text/javascript">

var firstname;
firstname="Arshid";

document.write(firstname);
document.write("<br />");

firstname="AbulAzeez";
document.write(firstname);

</script>

<p>The script above declares a variable,
assigns a value to it, displays the value, changes the
value,
and displays the value again.</p>

</body>
</html>
```
